

WHAT IS CLAIMED IS:

1. A curling iron comprising:  
a first leg with a bottom surface and a second leg with a top surface,  
said bottom and top surfaces being in opposed relationship to each other and  
having a nested convex/concave shape.
2. The curling iron of claim 1 wherein both said legs are heated.
3. The curling iron of claim 1 wherein said first leg is biased  
against a second leg, and a release lever is provided for selectively overcoming the  
biasing force and separating said legs.
4. The curling iron of claim 1 wherein said first leg is pivotable  
relative to said second leg, and a clamp lever is provided for controlling the  
pivoting action.
5. A curling iron comprising:  
a pair of legs having opposed concave/convex surfaces, where both  
said surfaces are heated.

6. The curling iron of claim 5 wherein a first one of said pair of legs is biased against a second leg of said pair of legs, and a release lever is provided for selectively overcoming the biasing force and separating said legs.

7. The curling iron of claim 5 wherein a first leg of said pair of legs is pivotable relative to a second leg of said pair of legs, and a clamp lever is provided for controlling the pivoting action.
